

Elevator Calls Using Smart Locks

Overview: Automatic Elevator calls using IOT enabled smart home locks.

Current Challenges: Residential users comes out locking their home, reach to the elevator lobby and give call to the elevator, wait for the elevator to arrive. Automatically triggering the call upon knowing the home is locked in particular floor can greatly reduce the waiting time of the residents.

Business Requirements: Eco System Partner having smart lock solution IOT enabled. Should be possible to call 3rd party APIs i.e KONE APIs
