

Indoor Navigation

Organization: Kone

Overview: Indoor navigation solutions can guide the elevator users to navigate to the elevator lobbies and from lobby to workplace or any other interested place inside a particular floor. Partners companies with indoor navigation solutions can integrate our elevator using APIs, call the elevators based on their position etc.

Current Challenges: New visitors will have tough time to navigate inside the building, which group of elevators to take to reach certain floor. Navigation for the visitors is manually being guided.

Business Requirements: Eco system Partner Company with Indoor navigation solutions. Should have internet connectivity (assuming some solutions are offline) to call over APIs.
